

How To Install Learning Magic Goodies

You have downloaded one or more Clicker 5 gridsets. You have already decompressed the zip file, so you are ready to go! The gridsets should be copied into the folder that holds the shared files for Clicker 5, so that students will see them in Clicker Explorer. The following is the summarized and step-by-step instructions for finding this folder. Once you locate it, copy and paste the gridsets into it, or into a subfolder you have set up for Goodies. See important note at the end about how to install mini-units (folders with ! at the beginning of the name).

Short Instructions:

The full path to the Clicker 5 shared files is:

C:\Documents and Settings\All Users\Shared Documents\Clicker 5

Once you have that Clicker 5 folder open, copy and paste or alternately drag the gridsets into it. That's all—you're ready to use the gridsets.

Long Instructions:

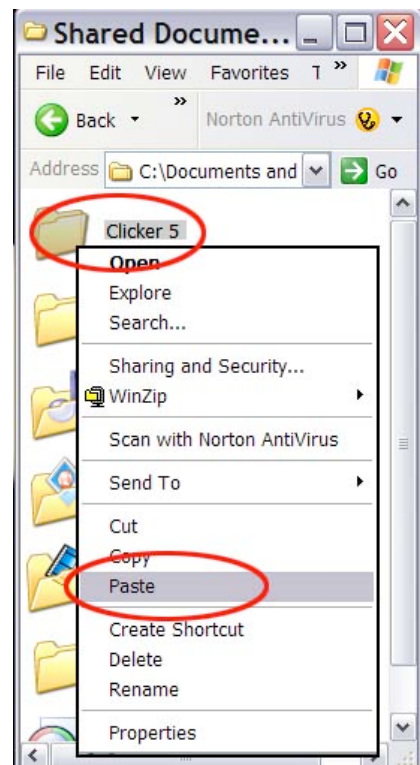

If you aren't sure how to find the shared files for Clicker 5, begin by going to the Start menu and double click to open My Computer.

If you see a shortcut icon for Shared Documents in the My Computer window, double click to open it. Otherwise, double click the Local Disk (C:) icon

and follow this path to Shared Documents: Double click Documents and Settings, then double click All Users, and then double click Shared Documents to open it.

Inside the Shared Documents folder, locate the Clicker 5 folder. Go back to your gridset(s),

highlight, and right-click to get the menu. Choose *Copy*. Highlight the *Clicker 5* folder, right-click, and choose *Paste* to paste the gridsets into the folder. Or, open the *Clicker 5* folder and paste into whichever subfolder you want to use. The gridsets are ready to use!

Note: These instructions are for individual gridsets. If you downloaded a mini-unit, which is a folder with several linked gridsets, you **MUST** copy and paste, or drag, the entire mini-unit into the *Clicker 5* shared files folder. You can identify a mini-unit because the folder name will begin with an exclamation mark. Example: *!My New Study Unit* If you see a folder like that, copy and paste the entire folder. Do **NOT** move the contents individually, or links may break.
